

“A Breakthrough in Natural Pain Management”

“A Holistic Approach that Bridges Mind and Body”

Pain and its management continues to be the chief reason people seek medical attention. Today, scores of nutritional supplements are available for individuals wishing to avoid surgery and the side effects of prescription pain medications. Unfortunately, most pain management formulas, albeit natural, remain focused on treating only the physical symptoms – not the secondary symptoms of pain such as its emotional and psychological aspects.

In simple terms, pain is the body’s way of telling us something is wrong. Pain receptors in our spinal cord send signals to the brain where the message of pain is registered. There’s no question that these messages also affect one’s psychological well-being which may result in depression, anxiety, sleeplessness and lethargy. The “holistic” approach to treating pain with nutritional supplements is highly effective and ever mindful of the complex interplay between the mind and the body’s own healing mechanisms.

Delta Life introduces two formulations, that when taken together, provide a comprehensive system that addresses optimum pain management.

NATURAL PAIN MANAGEMENT – THE MIND

RESTINOL™ offers clinically proven ingredients that work synergistically with those found in FLEXITOL. However, RESTINOL addresses the “symptoms” of pain – symptoms that are not necessarily felt physically – but are felt *psychologically* and *emotionally*.

By working with the human body’s total cycle of pain by addressing physical, emotional and psychological symptoms, we a more complete and whole body approach for those who wish to lead a more active, healthy lifestyle.

Serotain™

Serotain is derived from an extract of *Griffonia simplicifolia*, a West African medicinal plant and other natural sources of 5-HTP which provides brain cells with the necessary materials to make additional serotonin. Serotonin, known as the “feel good” neurotransmitter in the brain, is responsible for numerous biochemical responses in the body including pain management, establishing normal sleep/wake cycles and elevating normal mood levels. Serotain’s benefits are achieved without monoamine oxidase inhibition (MAOI) and without the possible side effects of other antidepressant drugs such as Prozac, Zoloft and Imipramine.
